

- Před montáží si přečtete celý návod
- Pomocí seznamu dílů se přesvědčte, že jste obdrželi všechny jeho části
- Při montáži používejte vhodné bezpečnostní brýle nebo jiné ochranné pomůcky

Před montáží

Před instalací si důkladně prostudujte tyto pokyny. Během instalace je třeba dodržovat místní bezpečnostní předpisy a průmyslové normy. Nařízení se mohou, mimo jiné, vztahovat na:

- Bezpečnostní přilby, ochranu očí a ochranný oděv
- Bezpečnostní postroj pro pracovníky pracující ve výškách
- Řádný žebřík, klec a jejich bezpečné použití

Před instalací zkontrolujte všechny součásti a díly. Všechny díly jsou označené číslem, při kontrole tato čísla porovnejte s dodaným seznamem dílů.

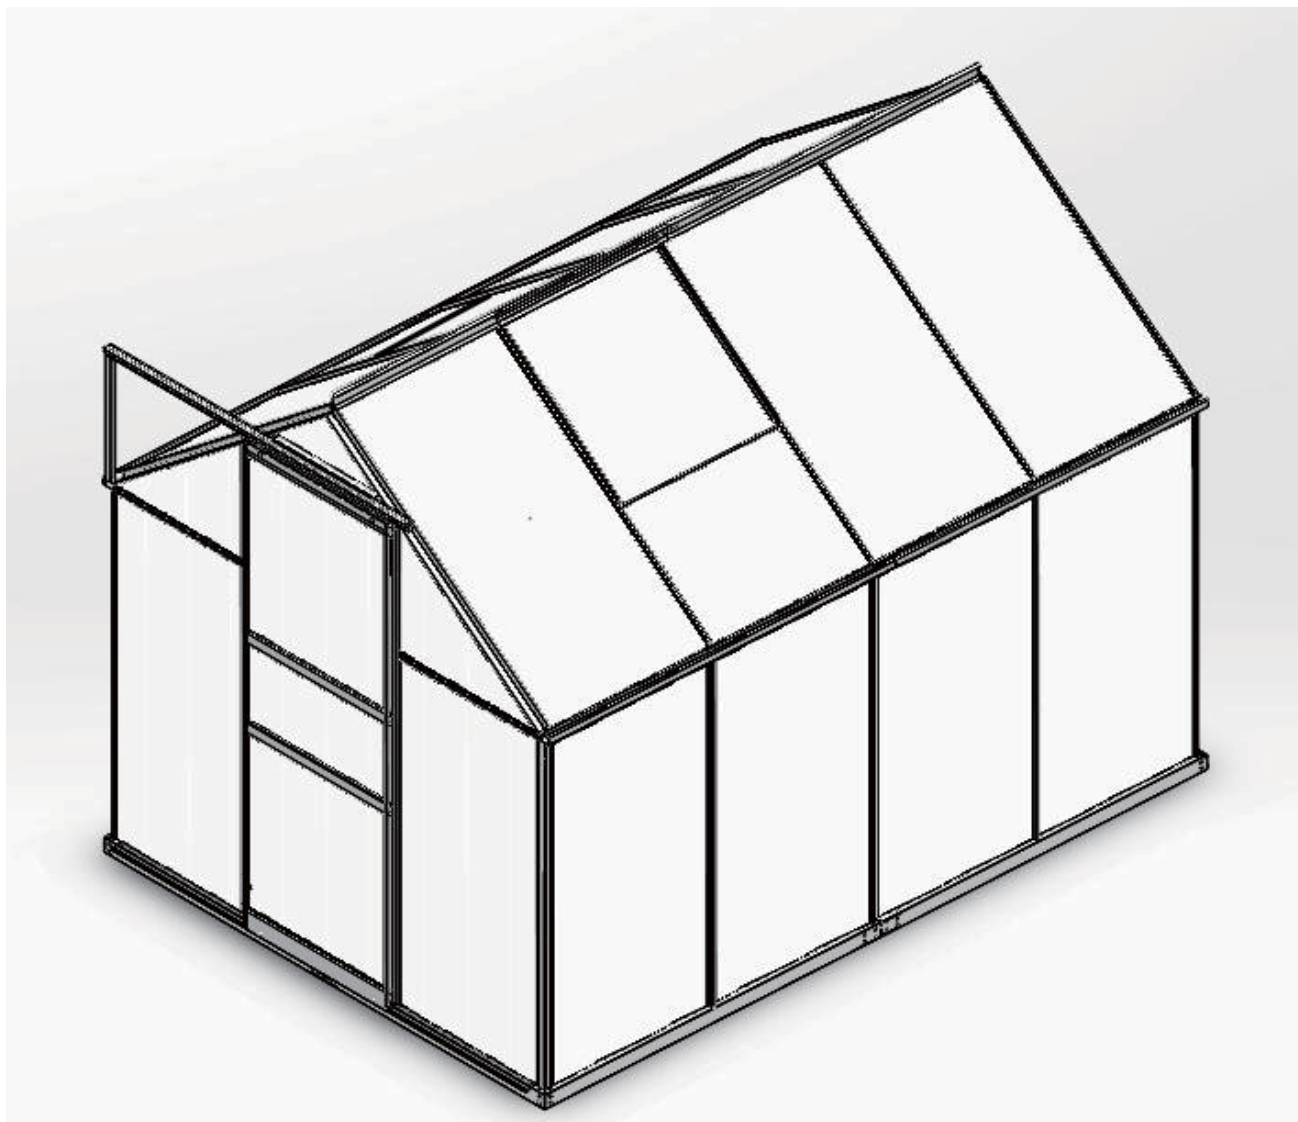

Pro instalaci si zvolte bezvětřný den nebo den s mírným větrem. Pokud fouká silný vítr, je montáž náročná. Konstrukci nijak neupravujte. Během instalace na rám nezavěšujte žádná závaží, ani díly. Neručíme za škody nebo zranění vzniklá nesprávnou instalací, neoprávněnými úpravami nebo extrémním počasím. Tato stavba není určena pro bydlení.

Na rám, kde se spoje dotýkají a kde se rám dotýká krytu, doporučujeme nalepit nebo přidat pěnu/gumu. Prodlouží to životnost krytu.

Před sestavením si nejprve pročtěte seznam částí a spočítejte položky, abyste věděli, že máte vše připravené.

Hlavní specifikace

Celková velikost po smontování (cm): D 257 * Š 192 * V 195 (cm)

Doporučované nástroje

Ochranné pomůcky:

1. Bezpečnostní přilba

2. Rukavice

3. Ochranné brýle

Měřicí nástroje a instalační zařízení:

1. Měřicí pásmo

2. Úhelník

3. Štafle

4. Klíč C10

5. Křížový šroubovák

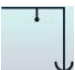

6. Značkovač

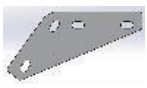

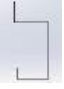

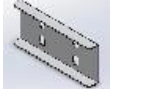

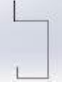

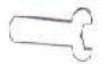

7. Palička

LEVÁ STRANA

Poznámka: První deska je vložena do hliníkové části. Potom umístíte pružinu na vnější povrch proti desce ve směru instalace znázorněné na obrázku níže.

Po montáži

Pravidelně procházejte kolem skleníku a důkladně ho kontrolujte, abyste se ujistili, že všechny části jsou správně upevněny a celá konstrukce je v pořádku. Zkontrolujte všechny šrouby a matice i všechny spoje, abyste se přesvědčili, že jsou ve správné poloze.

Důrazně doporučujeme ihned odstraňovat napadaný sníh. Nenechávejte sníh ležet na střeše přes noc. Na všech stranách vždy udržujte volný prostor v šířce cca 1 metru.

Nenechte sníh hromadit po stranách skleníku. Jinak by tlak z boků tlačil směrem dovnitř a mohlo by dojít ke zhroucení skleníku.
